

Project2 Proposal - John Alexis Guerra Gomez (Teacher)

Project Name: Where2Bite

Team Members:

Victor Cao

Alexander Gutting

Project Description:

Where2Bite is a full-stack web application that helps users decide where to eat. Users can create and manage a personal list of restaurants, save favorite restaurants, and use a random picker when they are unsure what to choose. The application simplifies dining decisions and helps users keep track of restaurants they enjoy. In addition, the user can also add his/her favorite restaurants into different categories/folders (e.g. Legal Sea Foods in Seafood category, P.F. Changs in Asian Cuisine category, Jake & Joes in Sports Bar category, etc).

User Persona:

Victor is a graduate student who frequently eats out with friends and family. With so many restaurant choices available, he often spends too much time deciding where to go. He wants a simple tool that helps him organize restaurant options and quickly choose a place to eat.

Alex is a graduate student who loves Italian food such as pizza and pasta as well as Chinese food such as noodles and dumplings. He also likes to eat out and stay organized. Like Victor, Alex is in search of a tool that helps him keep track of his favorite restaurants and makes it easier to stay organized in terms of restaurant options.

User Stories

Victor Cao

1. As a user, I want to create an account and log in so that I can save my restaurant preferences.
2. As a user, I want to save and remove favorite restaurants so that I can quickly access restaurants I enjoy.

Alexander Gutting

3. As a user, I want to add, edit, and delete restaurants so that I can maintain my personal restaurant list.

4. As a user, I want the system to randomly select a restaurant from my list so that I can make dining decisions more easily.

Technical Design

Users Collection

- Stores user account information.
- Stores authentication credentials.

Restaurants Collection

- Stores restaurant names.
- Stores cuisine types.
- Stores restaurant notes and ownership information.

Favorites Collection

- Stores relationships between users and favorite restaurants.

Technical Independence

Victor Cao independently implemented:

- User registration
- User login
- Favorite restaurant management
- Related frontend pages, backend APIs, and database operations
- Will work on approximately 25-35% front-end and approximately 65-75% back-end development
- Will focus mainly on Express/Node.js in addition to focusing on front-end and MongoDB
- Will draw the lock screen storyboard
- Will create JSON and ESLint files

Alexander Gutting independently implemented:

- Restaurant creation, editing, and deletion
- Random restaurant picker
- Related frontend pages, backend APIs, and database operations
- Will work on approximately 65-75% of front-end and approximately 25-35% of back-end development

- Will focus mainly on HTML/CSS/JS in addition to focusing on back-end and MongoDB
- Will format/proofread HTML and CSS code
- Will draw the home screen storyboard

We collaborated using:

- VSCode (IDE) (we will be using the Live Share feature to collaborate)
- Figma (for mockups)
- Google Suite (for Design Document/Slideshow)
- Microsoft Teams (for communication)

Technology Stack

Frontend:

- HTML5
- CSS3
- Vanilla JavaScript (ES6)

Backend:

- Node.js
- Express

Database:

- MongoDB (Native Node.js Driver)

Data Requests:

- Fetch API

Formatting:

- Bootstrap
- Prettier
- Validator W3

Direct Compatibility:

- ESLint

- JSON

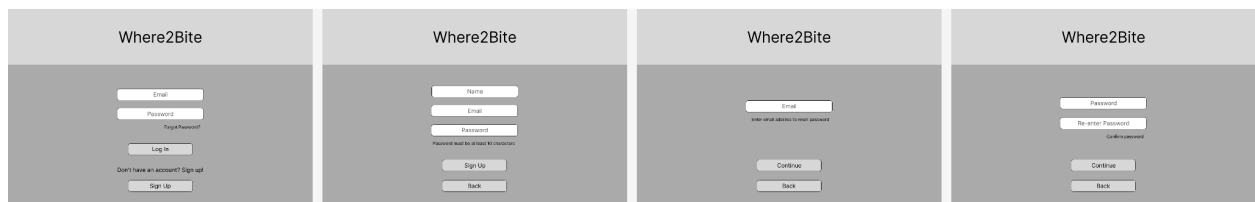

Sources/Inspiration:

The inspiration for this project comes from my own daily experiences. I often find it difficult to decide which restaurant to visit, especially when there are many options available. As a result, I thought it would be helpful to have an application that can assist with making dining decisions by randomly selecting from a personalized list of restaurants.

The idea of including a favorite feature also comes from my personal preferences. Since I am selective about the food and restaurants I enjoy, I wanted a way to save my preferred choices and ensure that recommendations are tailored to places I would actually like to visit. This combination of convenience and personalization inspired the development of Where2Bite.

Design Mockups:

Lock Screen:

Home Screen:
